### 注意事项 Matters Needing Attention

1. 磁保持继电器出厂状态为触点闭合状态（复位状态），但因运输或继电器安装时受到冲击等因素的影响，可能会改变状态，因此在使用前（电源接入时）有必要采取措施重新使其复位。

Magnetic latching relay factory condition for contact closure state, but because carry or installed when subjected to impact, may change state, therefore before use to make its reset.

2. 为了确保磁保持继电器可靠动作，施加到线圈上的激励电压须达到额定值，且脉冲宽度设置须达到动作时间的5倍以上。

In order to ensure the reliability of relay coil voltage, must reach the rated value, the pulse width must be 5 times more time.

3. 不带软铜编织线的磁保持继电器，负载引出脚不能焊锡，不能随意扳动。

Not with braided line relay, the load pin can not solder, not arbitrarily wrench.
